Intelligence in World History, c. 1500-1918

Veranstalter: Deutsches Historisches Institut London; International Programmes, Pembroke College, Cambridge
Datum, Ort: 06.02.2014-08.02.2014,
Bericht von: Tobias Graf, Cluster of Excellence „Asia and Europe in a Global Context“, Ruprecht-Karls-Universität Heidelberg

On 6–8 February 2014, the German Historical Institute London hosted the conference „Intelligence in World History, c. 1500-1918“ in collaboration with the International Programmes at Pembroke College, Cambridge. For a long time, the history of intelligence has been a poor relation to the study of international relations. On the whole, historians have tended to pay relatively little attention to the kinds of information at the disposal of those who made decisions about war and peace and even less to the methods by which such decision makers acquired the information which underlay the decisions they took. Yet few would question that it did matter what decision makers knew about the world which they reacted to, shaped, and attempted to control. The meeting was organized by Christopher Andrew (Cambridge), Andreas Gestrich (GHIL), Tobias Graf (Heidelberg), Daniel Larsen (Cambridge), and Sönke Neitzel (London) in order to stimulate exchange between historians working on intelligence organizations and issues across traditional boundaries of periodical and regional specialization and thus gain a better understanding of what provocatively be called the ‘long’ early modern period of intelligence services.

The event opened with a keynote lecture by CHRISTOPHER ANDREW (Cambridge), the official historian of the British Security Service (MI5), in which he provided a sweeping overview of the development of secret intelligence in Europe from the Renaissance to the end of the First World War. He highlighted the general lack of awareness of the history of intelligence across the ages. In particular, rapid advances in techniques and technologies since the early twentieth century obscure the fact that, for centuries, the West had been far behind its competitors in Asia and the Middle East, particularly in the field of cryptology. Here, European states began to take the lead only gradually from the sixteenth century onwards. These advances, however, remained geographically and chronologically uneven.

Sir RICHARD DEARLOVE (Cambridge), former head of the British Secret Intelligence Service (SIS), complemented the historian’s overview with insights from his own experience as an intelligence professional. Crucially, the need of intelligence services for secrecy provides a major obstacle to developing a historical understanding of its activities and role, even for professionals themselves. The same need for secrecy also largely prevents writing the history of intelligence as a human history, even as, not least because of the continued importance of human intelligence, the human factor looms large in the activities and performance of intelligence services.

Sir CHRISTOPHER BAYLY (Cambridge) opened the first thematic session by placing intelligence in a wider framework. Focusing on British India, he highlighted the importance of knowledge management for both the colonial government and those who provided resistance to it. The colonial state could not function without tapping into pools of what Bayly calls ‘mundane knowledge’. This form of knowledge collection from local knowledge communities and – from the nineteenth century onwards – newspapers provided a central element of British colonial intelligence.

CENGIZ KIRLI (Istanbul) explained how the Ottoman state in the nineteenth century, particularly during the rule of Abdülhamid II (1876-1909), attempted to tap into precisely such knowledge communities by conducting systematic surveillance of the population in the capital. While such activities had been an integral part of Ottoman governance in previous centuries, they had remained sporadic. Under Abdülhamid, what had originally been a means for identifying and silencing dissent, now served the wider purpose of gathering information as well as monitoring public opinion, which, as Kirli argued, ultimately opened policy-making to the influence of subjects’ political wishes.

Moving back in time to the sixteenth and seventeenth centuries, MIA RODRIGUEZ-SALGADO (London), IOANNA IORDANOU
(Warwick), and TOBIAS GRAF (Heidelberg) showed that well-organized and often bu- reaucratic intelligence services had come into being long before the emergence of the mod- ern nation state. The comparison between the Venetian and Austrian-Habsburg intelli- gence organizations in the Ottoman Empire on the one hand and their Spanish-Habsburg counterpart are particularly instructive. While in the former resident ambassadors in Is- tanbul took the lead by virtue of their office, the Spanish Habsburgs, lacking formal diplo- matic relations with the Sublime Porte, relied on networks of spies and informants run from the fringes of their empire. However, as Rodriguez-Salgado pointed out, such a degree of organizational sophistication was rarely permanent. Rather, agencies and networks developed in response to specific threats and fell into disuse once these threats had dissi- pated. Only Venice’s intelligence apparatus, which Iordanou showed to have been institu- tionalized in a single centralized office early on in the sixteenth century, presented an ex- cep tion from this rule.

This is not to say that intelligence was de- emed unimportant – on the contrary. Taking the eighteenth-century electors of Saxony Au- gust II and August III, who also were kings of Poland in personal unions, as a starting point, ANNE-SIMONE ROUS (Dresden) em- phasized just how important intelligence was to early modern rulers as an element of secret diplomacy. Drawing on her case studies, she suggested a refined model of secret diploma- cy which divides pertinent activities into three categories according to their aims and means: defensive, offensive, and aggressive.

The contributions by KARL DE LEEUW (Amsterdam) and NEIL KENT (Cambridge) presented historical precedents for the ‘spe- cial relationship’ between the UK and the US. Already during the Nine Years’ War (1688- 97), William III of England (r. 1689-1702) and Stadtholder in the Dutch Republic (r. 1672- 1702) relied heavily on postal interception and codebreaking in England, the Nether- lands, and Hanover to thwart French mili- tary and diplomatic efforts. However, as de Leeuw showed, even as Great Britain and the Netherlands intensified their military co- operation over the course of the eighteenth century, their former intelligence alliance turned into rivalry out of fear that they were pursuing conflicting interests. Kent, in con- trast, demonstrated that, as a direct result of the dynastic connection, Great Britain and Hanover maintained an intelligence alliance throughout the eighteenth century. In spite of intelligence being tainted by its reputation as ‘dirty work’ at the time, in his various go- vernment positions, Thomas Pelham-Holles, 1st Duke of Newcastle (1693-1768), excelled in putting it to good use, especially to keep the so-called Jacobites, the supporters of the Stuart dynasty which had been deposed in 1688, and their French allies at bay.

Russia provided the geographical focus for the penultimate session which opened with SVETLANA LOKHOVA’s (Cambridge) pre- sentation of rare and previously unused ma- terial from the archives of the Okhrana, the ts- arist intelligence service. DOMINIC LIEVEN (Cambridge) undertook an instructive dia-chronic comparison of Russian intelligence during the Napoleonic Wars and on the eve of the First World War. Counterintuitively, as a result of the service’s professionalization by 1914, Russian intelligence had been more ef- fective in the earlier period. While Russian ‘agents’ by virtue of their social status freely mingled with the French elite in the early nine- teenth century, professional intelligence of- ficers in the latter period had been deprived of this possibility by their specialization. This is reflective of a wider social reconfiguration which resulted in the separation of the lar- gely overlapping premodern elites into more strongly separated segments of political, mili- tary, and social elites.

CALDER WALTON (London) highlighted the importance of the colonial experience for the development of intelligence services in Europe. This was especially, though not ex- clusively, true of the UK where the majori- ty of the personnel in the domestic security and foreign intelligence services had a colo- nial background. These officers brought with them innovative ideas and practices such as fingerprinting which had been developed and successfully implemented in the colonies.

That the role of intelligence very much de- pends on a country’s political culture became clear from DANIEL LARSEN’s (Cambridge)
Christopher Andrew (Cambridge), Intelligence in World History from the Renaissance to the First World War

Sir Richard Dearlove (Cambridge), The Status of Intelligence History

Session 1
Chair: Christopher Andrew (Cambridge)

Sir Christopher Bayly (Cambridge), Knowledge, Information and Intelligence in Colonial India and beyond

Cengiz Kurli (Istanbul), Intelligence in the Late Ottoman Empire

Session 2
Chair: Tobias Graf (Heidelberg)

Mia Rodríguez-Salgado (London), Intelligence in the Spanish Monarchy in the Sixteenth and Early Seventeenth Centuries

Ioanna Iordanou (Warwick), What News on the Rialto? Spies, Informants and the Myth of Venice in the Sixteenth and Seventeenth Centuries

Session 3
Chair: Peter Martland (Cambridge)

Tobias Graf (Heidelberg), Austrian-Habsburg Intelligence on the Ottomans in the Late Sixteenth Century

Anne-Simone Rous (Dresden), Saxon Intelligence in the Eighteenth Century

Session 4
Chair: Sönke Neitzel (London)

Karl De Leeuw (Amsterdam), Anglo-Dutch Intelligence Collaboration and Rivalry during the War of the Spanish Succession and Its Aftermath, 1704–1716

Neil Kent (Cambridge), Hanoverian Intelligence: Thwarting the Jacobites and France

Session 5
Chair: Neil Kent (Cambridge)

Svetlana Lokhova (Cambridge), From Okhrana to Cheka: Revelations from Russian Archives

Dominic Lieven (Cambridge), Russian Intelligence in the Napoleonic Era and on the Eve of World War I: A Comparison
